Cristian Prieto

Front-End Developer

Bio

Detail oriented Front-End Developer in constant search of new **challenges**, eager to grow and **learn** new technologies. With a digital illustration background, I'm **determined** to create the best possible user experience using preferably **React**, a **curious** mind and a **resolute** spirit.

Projects

- **Shopbix:** An app that started with the idea of creating a shopping cart and only adding/deleting items features progressed to the point of having payment methods. I use many of the concepts I learned before, such as fetching **API** data, **React router**, **Tailwind** and **good practices** with **clean** code.
- **Foodubix:** With the free spoonacular API, this app allows the user to search among thousands of recipes by ingredient or randomly and prints on screen different dishes in a visually **attractive** way. Navigate between sections thanks to React router and styled with **css modules**.
- **Media-notes app:** Programmed in React, this app saves data in **local storage** (comments, date and score of a movie/book/TV Show/video-game). Allows you to remove or edit any of the saved entries with a mobile first **responsive design**.

SKILLS

Html

Css

Tailwind

Javascript

React

VS Code

SOFT SKILLS

Critical thinking

Adaptability

Modern designs

Not fearful of failure
